AT&T Site Name: Central Baptist

AT&T Site Number: AR1389

Site Address: 696 Gladiolus

Type of Installation: New Monopole "Slick Stick"

AT&T performs continuous reviews and testing of our system for coverage and capacity in handling all the phone calls and ever growing data communication transmitted over our system. Central Baptist in the area of Hwy 1 South is an area where an additional antenna site is required to serve the citizens of Jonesboro. A thorough search of the area has not produced a structure by which we can mount antenna, therefore we are moving forward with having one created. There is a need for an additional structure in this area.

The owner of this site has designed this site to house six (6) centerlines of antennae allowing for the maximum number of tenants for which the tower manufacturer designs. It is the intention of AT&T to allow collocation and has allowed for that on the pole itself and with appropriate ground space for their equipment.

The Equivalent Isotropically Radiated Power (EIRP) for this installation is 500 watts or less. The current FCC rule (reference: Code of Federal Regulation, Title 47-Telecommunications, Chapter 1-Federal Communications Commission, Part 24-Personal Communications Services, Subpart E-Broadband PCS, Section 24.232-Power and antenna limits). This installation, as designed, meets the FCC requirement.

A handwritten signature in cursive script, appearing to read "Lowell Jones", written over a horizontal line.
