Dear City of Jonesboro Representatives,

At Hometown Manufacturing, Inc., our mid-duty Villager model transit trolley is built on a Ford F53 chassis with a Ford V8 7.3L gasoline Engine. We offer a hybrid kit upfit that charges a 259V high efficiency lithium-ion battery through regenerative braking. During acceleration, the battery releases stored energy to the electric motor, which helps propel the vehicle – reducing fuel consumption and lowering emissions.

We are confident that Hometown Manufacturing, Inc is the only transit trolley manufacturer offering this gas/electric hybrid technology on a high-floor mid-duty platform.

If further information is needed, please contact Donovan Hickman.

Thank you,

Dustin Pence
COO
