1.0 INTRODUCTION AND PURPOSE

This report documents the results of impact analyses conducted for a proposed Kum & Go redevelopment in the northwest corner of Dara Drive & AR 18/Highlands Drive intersection in Jonesboro, Arkansas. A map showing the general location of the study area and study intersections is illustrated in **Figure 1**.

This traffic impact study (TIS) was conducted to identify the anticipated trips that would be generated by the proposed development to determine the effects of site traffic on the surrounding street network. This study is considered a Level 1 Traffic Impact Analysis (TIA) according to the City of Jonesboro Transportation Impact Study Guidelines (TISG).

According to the TISG, site traffic from the development will be analyzed with existing traffic conditions. Specific recommendations are included at the end of the report to help mitigate the traffic impacts.

2.0 DATA COLLECTION

The data collection effort included obtaining peak hour turning movement counts and documentation of current street geometrics and traffic control.

Olsson coordinated intersection turning movement counts on Thursday, November 19, 2020 at the intersection of Dara Drive & AR 18 and Hytrol Driveway (approximately 200' west of Dara Drive) & AR 18. Each count was taken at 15-minute intervals from 7:00am – 9:00am, 11:00am – 1:00pm, and 3:00pm – 6:00pm. Existing heavy vehicle traffic on AR 18 is under 4 percent of total traffic.

Existing traffic volumes are illustrated in **Figure 2**. Count data is provided in **Appendix A**.

Figure 1. Vicinity Map

3.0 EXISTING CONDITIONS

3.1 Network Characteristics

There are two streets in the study area: AR 18 and Dara Drive. Existing street characteristics are summarized in **Table 1** below. Data for each street was acquired from aerial photography and the Arkansas State road functional classification map.

Table 1. Existing Street Characteristics.

Street	Section	Median Type	Posted Speed	Functional Classification
AR 18	5-Lane	TWLTL*	45 mph	Principal Arterial
Dara Drive	2-Lane	Undivided	25 mph	Local

*TWLTL – Two-way left-turn lane

The existing study intersections of Hytrol Driveway & AR 18 and Dara Drive & AR 18 are both unsignalized intersections. The Hytrol Driveway serves as one of the accesses for the Hytrol facility. The south leg of Dara Drive & AR 18 also serves the Hytrol facility primarily as a truck driveway. No pedestrian crossings or sidewalks are currently located within the study area.

Existing lane configurations and traffic control are illustrated in **Figure 2**.

3.2 Existing Capacity Analysis

Capacity analyses were performed for the existing study intersections using the existing lane configurations and traffic control. Analyses were conducted using Synchro, Version 11.0 which is based on the Highway Capacity Manual, 6th Edition methodologies. For simplicity, the amount of control delay is equated to a grade or Level of Service (LOS) based on thresholds of driver acceptance. The amount of delay is assigned a letter grade A through F, LOS A representing little or no delay and LOS F representing very high delay. **Table 2** shows the delays associated with each LOS grade for signalized and unsignalized intersections, respectively.

Table 2. Intersection LOS Criteria.

Level-of-Service	Average Control Delay (seconds)	
	Signalized	Unsignalized
A	≤ 10	≤ 10
B	> 10-20	> 10-15
C	> 20-35	> 15-25
D	> 35-55	> 25-35
E	> 55-80	> 35-50
F	> 80	> 50

Highway Capacity Manual (HCM, 6th Edition)

The south leg of Dara Drive & AR 18 does not have a STOP sign located on the northbound approach to the intersection but was assumed for analysis purposes. The south leg of Dara Drive serves the Hytrol facility.

The results of the capacity analysis indicate that the northbound left-turn movement at Hytrol Driveway & AR 18 and northbound shared thru/left-turn at Dara Drive & AR 18 both operate at LOS F in the PM peak hour. These movements are vehicles leaving the Hytrol facility. All other individual movements operate at LOS D or better in all three peak hours. The 95th percentile queue length on the northbound left-turn movement at Hytrol Driveway & AR 18 is approximately 5 vehicles in the PM peak hour. The 95th percentile queue length on the northbound shared thru/left-turn movement at Dara Drive & AR 18 is approximately 2 vehicles in the PM peak hour.

A summary of the existing capacity analyses is illustrated in **Figure 2**. Detailed results are shown in **Appendix B**.

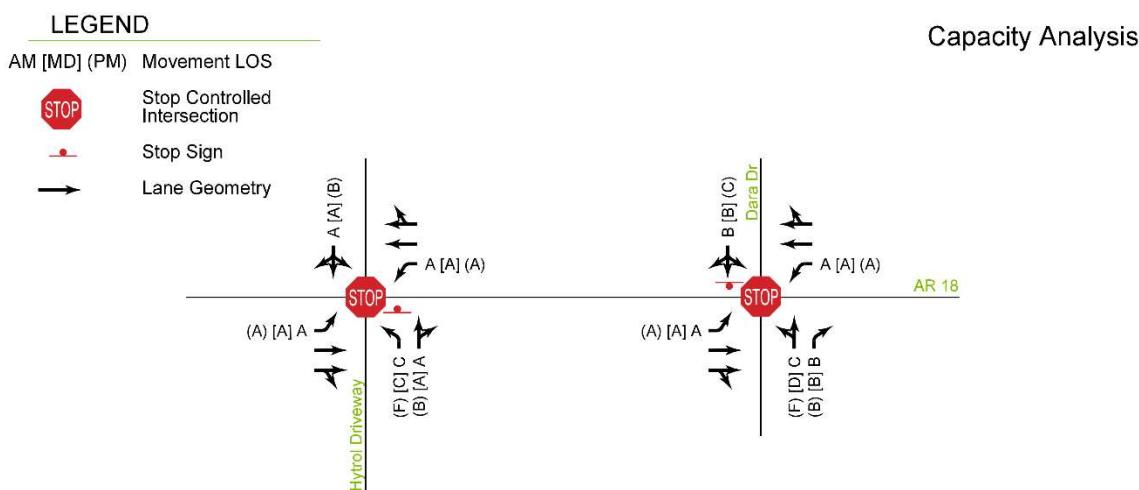

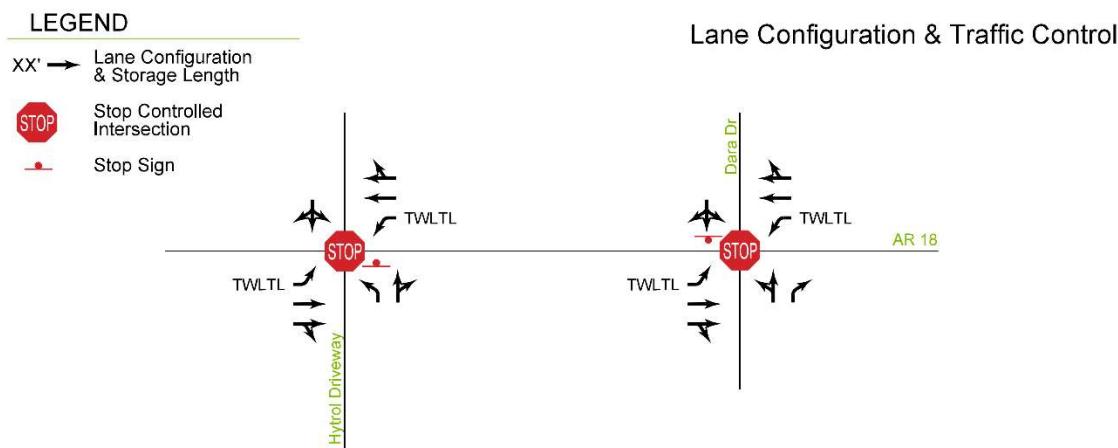

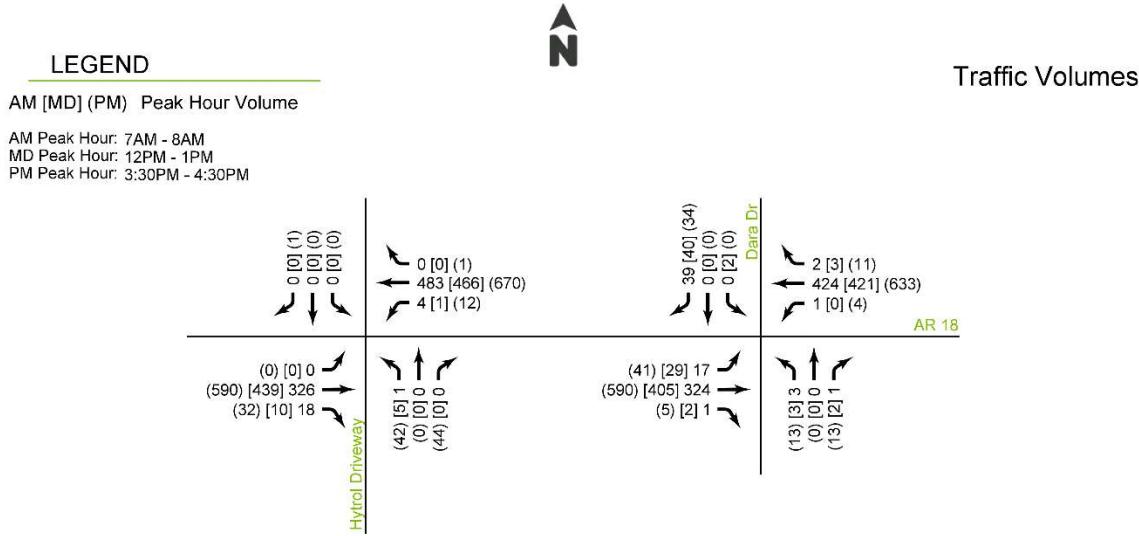

Figure 2. Existing Conditions

4.0 SITE CHARACTERISTICS

Trips anticipated to be associated with the redevelopment were generated and applied to the study network to determine street network operations and development impacts. The site has two drives: Site Drive 1 (located across from Hytrol Driveway off AR 18) and Site Drive 2 (off Dara Drive approximately 100' north of AR 18). The site plan for the development is illustrated in **Figure 3**.

4.1 Trip Generation

To determine the impact of potential site traffic on the street network, trips expected to be associated with the proposed redevelopment were generated and applied to the study network. The Institute of Transportation Engineers (ITE) provides methods for estimated traffic volumes of common land uses in the ITE Trip Generation Manual (10th Edition). The development consists of a gasoline/service station with convenience market with 12 fueling positions (Land Use Code 945).

The development is expected to produce 2,464 daily trips, 164 trips in the AM peak hour, and 190 trips in the PM peak hour. Trip generation expected by the development is summarized on **Table 3**.

Table 3. Trip Generation

ITE 10th Ed Code/Page	Land Use	Size	Units	Trip Gen. Avg. Rate/Eq.	Daily Trips				Total Daily Trips Enter	Total Daily Trips Exit
					Daily Trips	Net Daily Trips Enter	Trip Distribution Enter	Trip Distribution Exit		
945	Gasoline/Service Station with Convenience Market	12	Fueling Positions	205.36	2,464	2,464	50%	50%	1,232	1,232
Total					2,464	2,464			1,232	1,232

					190	190	50%	50%		
945	Gasoline/Service Station with Convenience Market	12	Fueling Positions	15.87	190	190			95	95
Total					190	190			95	95

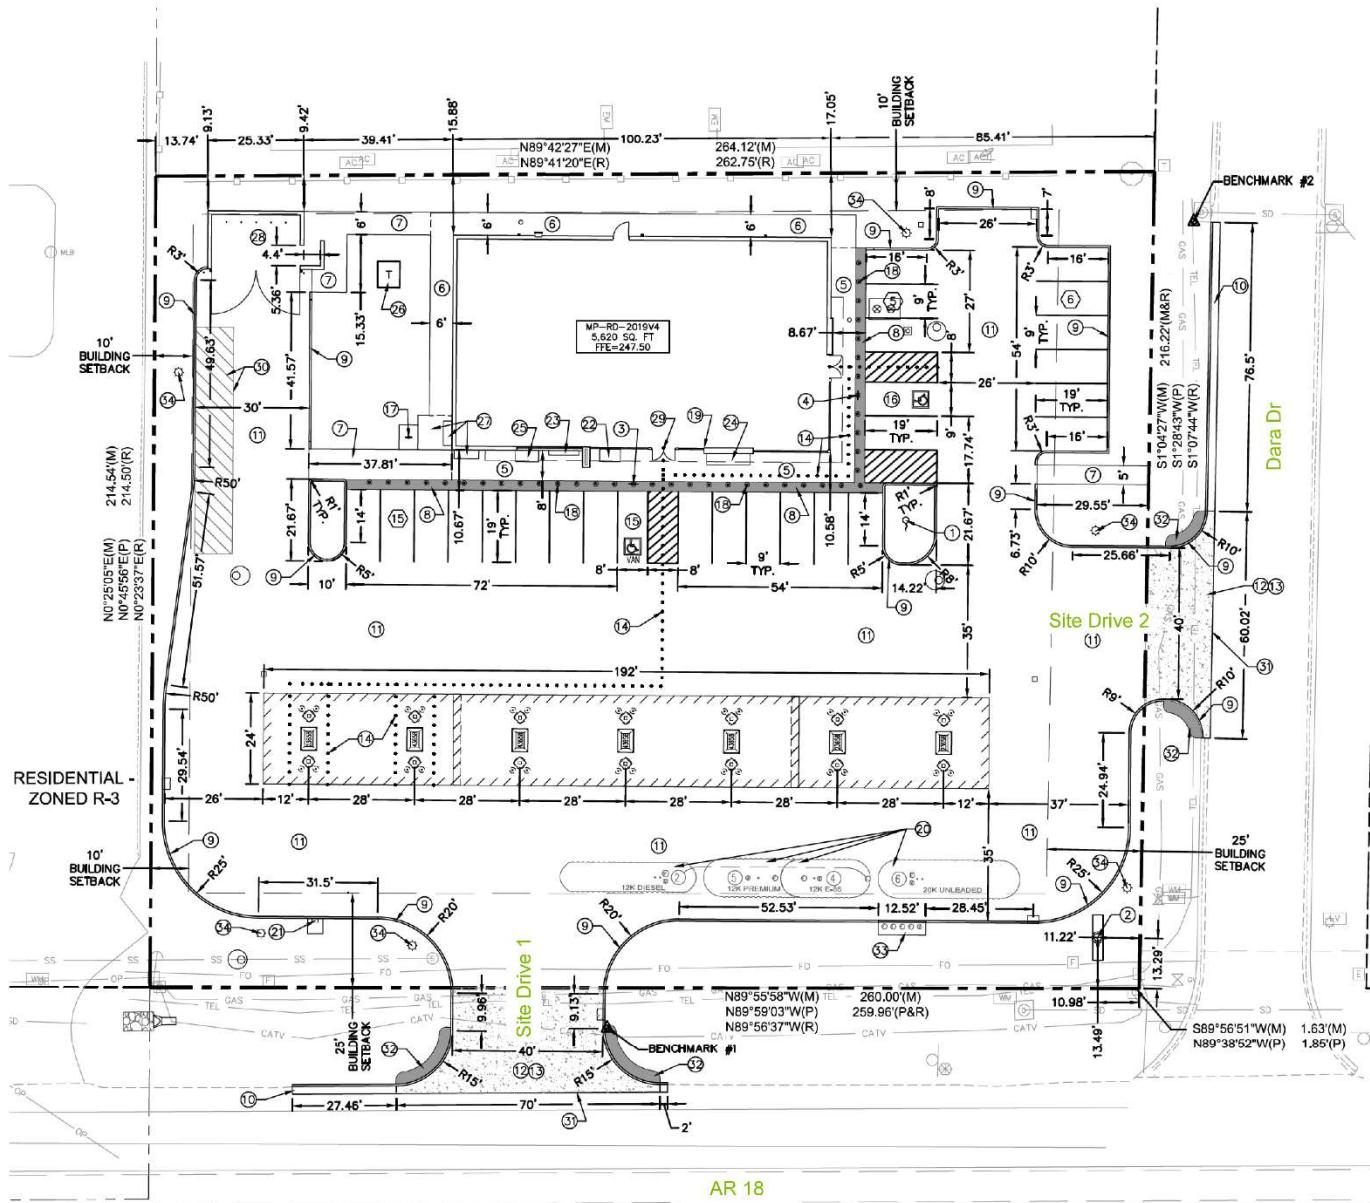

Figure 3. Site Plan

4.2 Trip Distribution

The distributions were based on existing trip patterns, development land-use characteristics, and street network provisions. Most users are expected to use Hytrol Driveway/Site Drive 1 & AR 18 to enter the site to access fueling locations. Primary trips are expected to largely come from the nearby Jonesboro area which lies mostly to the west of the proposed redevelopment. Pass-by trips are expected to be largely westbound right-turns. The prevalence of similar facilities and friction from entering and exiting by making a left-turn reduces the attractiveness of patronage and distributions were applied accordingly.

The primary trip distribution and site trips are illustrated in **Figure 4**. The pass-by trip distribution and pass-by trips are illustrated in **Figure 5**.

5.0 EXISTING PLUS SITE ANALYSIS

Existing traffic volumes were combined with the proposed site trips to develop Existing plus Site volumes for evaluation and capacity analysis purposes. The Existing plus Site traffic volumes are illustrated in **Figure 6**.

5.1 Geometric Improvements

According to the City of Jonesboro Access Management Policy (AMP), right-turn lanes are often necessary when the speed limit is 35 miles per hour or greater. A right-turn lane is recommended at Hytrol Driveway/Site Drive 1 & AR 18 to improve operations and safety. Providing a right-turn lane is expected to reduce weaving and sideswipe crashes due to vehicles braking in the thru lane, as well as, reducing rear end crashes. Due to the short distance between Hytrol Driveway/Site Drive 1 and Dara Drive, the right turn lane length should be maximized to provide the most storage length possible.

5.2 Existing plus Site Capacity Analysis

The right-turn lane outlined in the previous section was incorporated into the model and capacity analysis was performed. Results of the capacity analysis indicate the northbound left-turn movement and the southbound shared thru/left-turn movement at Hytrol Driveway/Site Drive 1 & AR 18 are expected to operate at LOS F in the PM peak hour. The northbound shared thru/left-turn movement and the southbound approach at Dara Drive & AR 18 are expected to operate at LOS F in the PM peak hour. All other individual movements are expected to operate at LOS D or better in both peak hours.

The 95th percentile queue length on the northbound left-turn lane at Hytrol Driveway/Site Drive 1 & AR 18 is expected to be approximately 9 vehicles in the PM peak hour. Both southbound lanes at Hytrol Driveway/Site Drive 1 are expected to be 2 vehicles in the PM peak hour. The northbound shared thru/left-turn lane and the southbound approach at Dara Drive & AR 18 are expected to be approximately 2 and 3 vehicles in the PM peak hour, respectively.

Although LOS F is expected on multiple movements in the PM peak hour, delays are expected to be limited to the peak period of operations which is not uncommon for unsignalized control on side streets/drives. The number of vehicles expected to make these movements are low and individual experiences finding gaps in traffic and delay will vary.

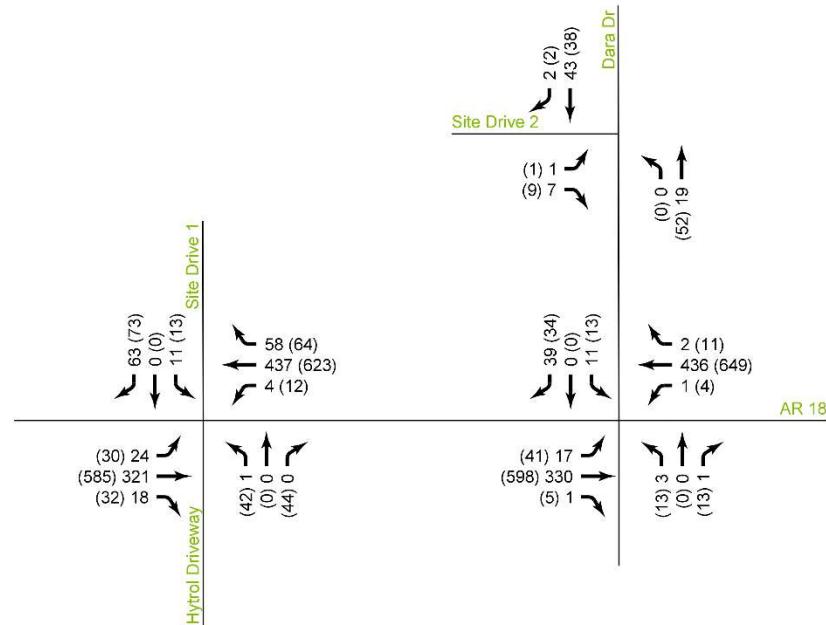

A summary of the Existing plus Site capacity analysis is illustrated in **Figure 6**. Detailed results of the capacity analysis are included in **Appendix C**.

6.0 CONCLUSIONS AND RECOMMENDATIONS

This report documents the results of impact analyses conducted for the Kum & Go redevelopment in the northwest corner of Dara Drive & AR 18 in Jonesboro, Arkansas. The study was conducted to identify the anticipated trips that would be generated by the proposed redevelopment and to determine the effects of site traffic on the surrounding street network. This study is considered a Level 1 TIA according to the City of Jonesboro TISG. The redevelopment was analyzed in addition to the existing conditions.

Intersection control evaluations and capacity analysis were performed to aid in determining street improvements and geometry. Based on the study results, the following improvements have been identified:

Existing plus Site Conditions

Hytrol Driveway/Site Drive 1 & AR 18 – Westbound right-turn lane with approximately 175' of storage and deceleration to maximize the available space between Site Drive 1 and Dara Drive. Place a STOP sign on the southbound approach.

Dara Drive & Site Drive 2 – Place a STOP sign on the eastbound approach.

The recommended improvements are shown in **Figure 7**.
